

The family with ever greater
ambitions...

BRIGHTER.

OUR CONCEPT FOR DEVELOPING HIGH-QUALITY PUBLICATION PAPER IS AS INGENIOUS AS IT IS SIMPLE. A STRIVING FOR CONTINUOUS IMPROVEMENT.

Our publication papers all have specific properties which make them suitable for newspapers, supplements, magazines, catalogues and commercial work. In our constant efforts to improve, we strive to produce publication paper of the best quality. We are constantly involved in product development, as exemplified by our GraphoNova product, which was launched last year.

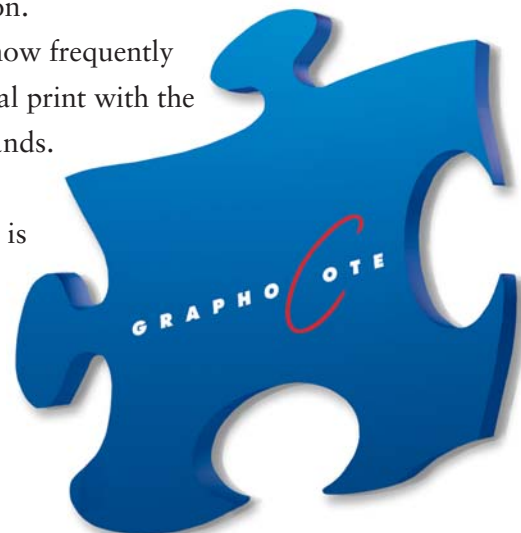

This time we have improved the appearance of our GraphoCote paper. The result is a much brighter product. GraphoCote's improved appearance is manifested in a brighter publication paper. Print gloss and runnability on the printing press remain as excellent as before.

**IMPROVED APPEARANCE!
BRIGHTER GRAPHOCOTE**

GraphoCote is a high-bright, coated publication paper with high surface weight, developed for quality magazines which have especially stringent requirements in terms of image printing and colour reproduction.

GraphoCote is now frequently used for commercial print with the same quality demands.

GraphoCote is FSC-certified, and is available in paper weights of 60 - 80 g/m².

GRAPHOLUX

GraphoLux is an excellent choice when the emphasis is on high bulk.

In addition to its generous bulk, GraphoLux has other favourable qualities such as high opacity, excellent image printing and strong runnability.

GraphoLux is FSC-certified, and is available in paper weights of 47 - 65 g/m².

GRAPHOMATT

We recommend GraphoMatt if you are looking for a publication paper which can combine good readability and superb image reproduction.

The paper's matt, non-reflective surface makes for ease of reading of the text while maintaining superb gloss in the illustrations.

GraphoMatt is FSC-certified, and is available in paper weights of 54 - 65 g/m².

We give major consideration to the environment in manufacturing and shipping our publication paper. We offer a unique combination of totally chlorine-free and FSC-certified products from our own Swedish forest. At least 30 percent of the wood fibre in our paper is certified according to the FSC. The FSC (Forest Stewardship Council) is an independent international organisation which promotes the development of responsible forestry.

SCA

MUCH MORE THAN PAPER

SCA's mission is to provide essential products that improve the quality of everyday life.

We are a well established supplier of Publication Papers and Pulp, with a long-term commitment to the market.
